Product Description

The HDD Terminator is the perfect solution to securely destroy all your magnetic and SSD hard drives.

Whenever a computer is replaced the hard drive still carries valuable company information that needs to be securely destroyed. Only the combination of degaussing the hard drive with a magnetic degausser and the physical destruction of the media ensures that all data is successfully destroyed and can no longer be accessed.

The unit is manually operated and does not require electricity for operation. Just lower the handle and a steel pin will perforate the hard drive. This procedure can be repeated to ensure a thorough physical destruction. The HDT1 can also be used to destroy other media like mobile phones and flash memory cards.

The HDD Terminator offers a portable low-cost solution to ensure that all hard drives are physically damaged before they leave your facility.

Features

Specification

		Model		HDT1
		Limitation of High Operation		2.8cm
Humidity	Operating		20%~80%	Stand Alone
	Storage		5%~95%	
Temperature	Operating		0?~75?	
	Storage		-20?~85?	
	System Dimension (cm)		49*13*67	
	Carton Dimension (cm)		46*52*22	
	Carton Weight (kg)		24
